SCHEUCHER®

Product description Scheucher Holzindustrie GmbH

Room climate Room temperature should be kept at a constant of 18–24°C and the relative humidity between 30% und 65%! This generally requires an appropriate air humidification in the heating season. We therefor recommend cold humidifiers with an integrated sterilization system. The installation of a Fidbox records your climate above and under your parquet floor, reports deviations from the optimum climate and can be conveniently monitored by mobile app.

Installation fully glued down with a classic Tongue/Groove-connection
